

Isa Chong Capstone Project: Wedding To-do App

Concept

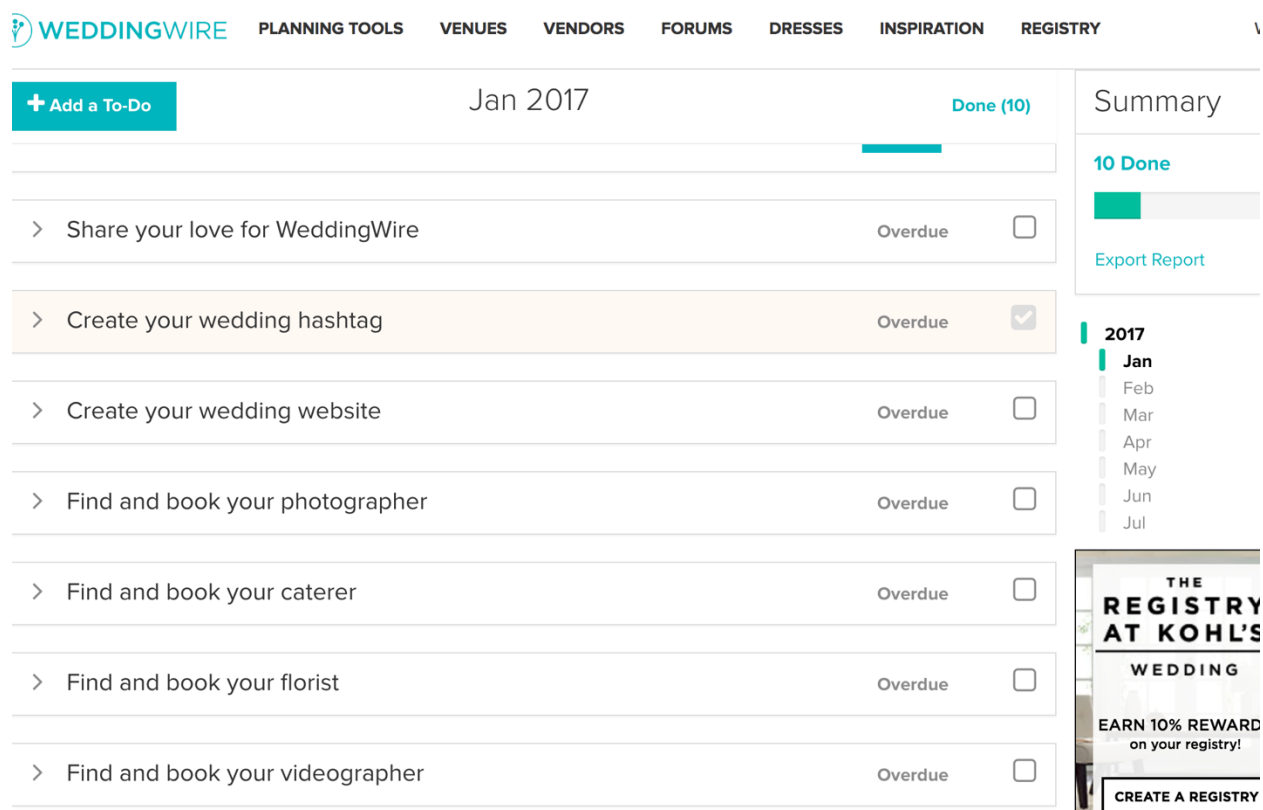

My capstone project will be a wedding to-do or tasks app. This project will also fulfill a personal need. I'm getting married in May (woo hooo!) and have been tracking tasks for the wedding on a Word doc and would like to create a checklist in a prettier and user-friendly app. Initially, I went on the usual wedding sites and online tools to use their checklists but they were not as flexible as I thought they would be. Their checklists fit well with traditional weddings and timelines but didn't allow me to shorten the tasks or change the timeline in a way to reflect what my planning schedule would be. Instead of one year to plan the wedding, I had 5 months, an out of the country location, and was not incorporating many of the traditional aspects of an American style wedding-ceremony and reception because it will be a blend of Korean and Jewish traditions.

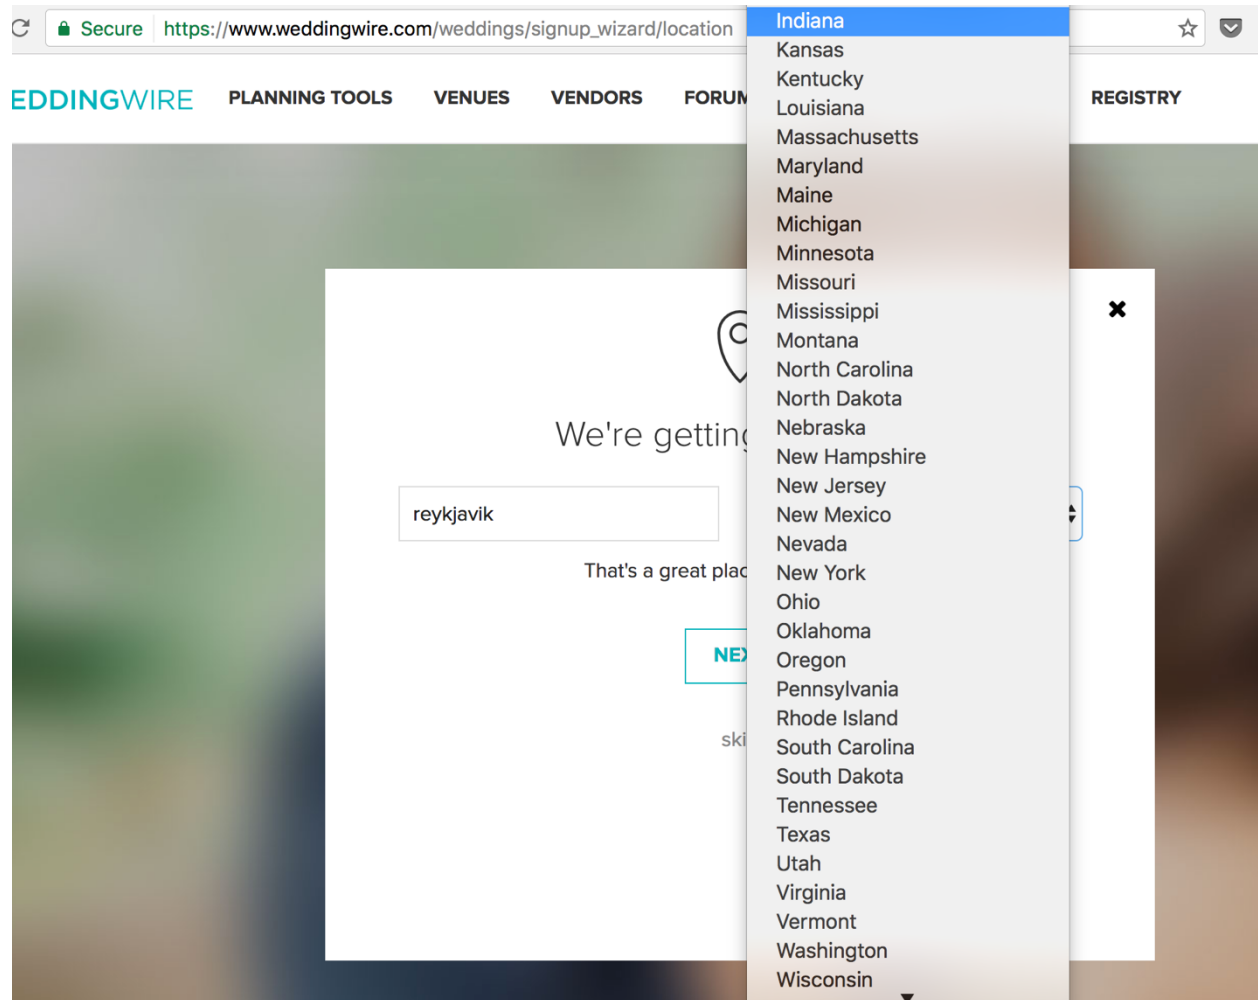

Online checklist but in Word

The Knot's online checklist has set tasks and due dates that cannot be removed or bypassed.

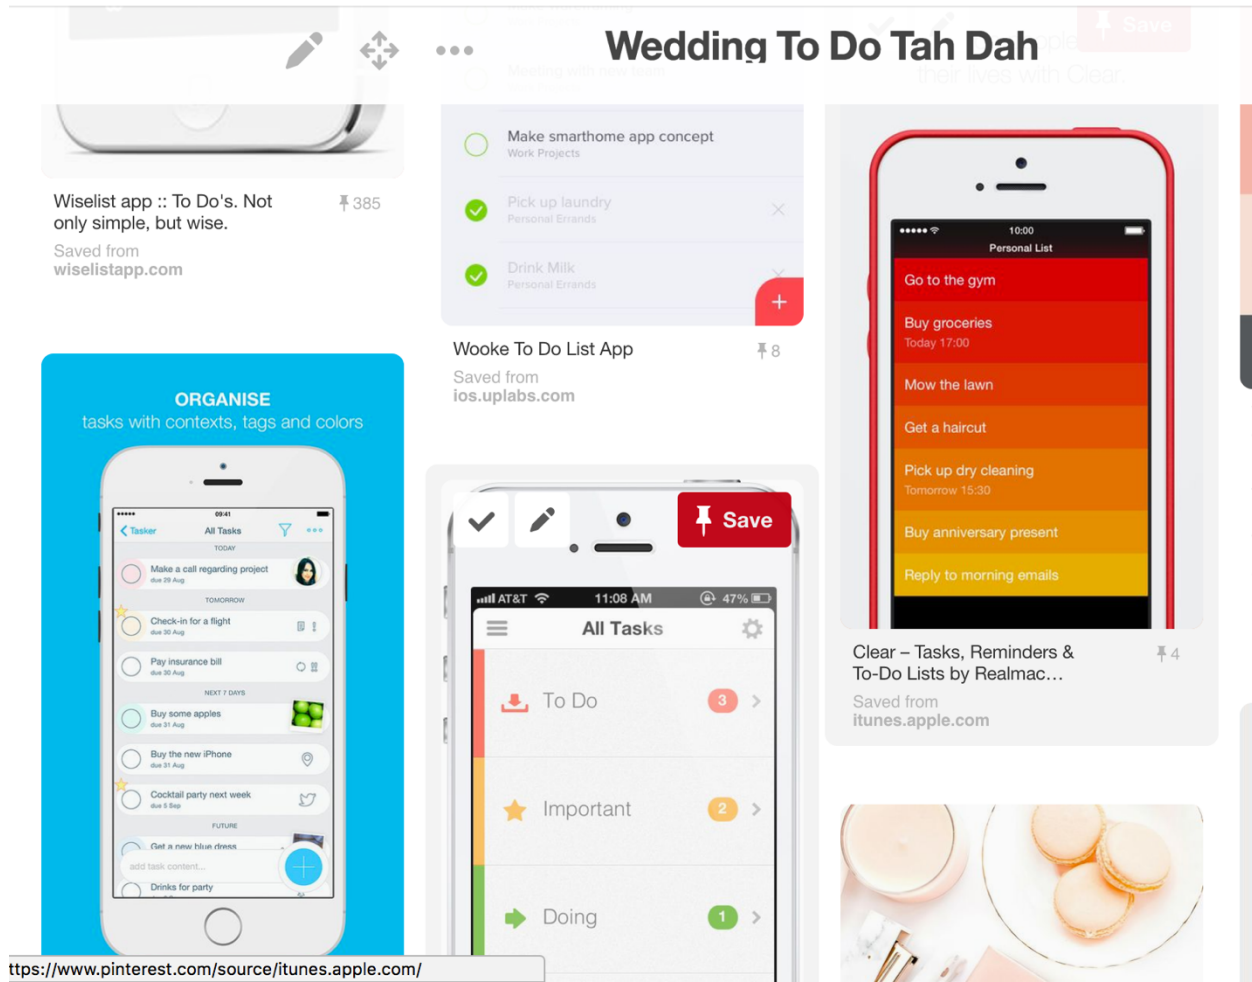

WeddingWire's checklist is similar

Only for US locations

Moodboard on Pinterest: <https://www.pinterest.com/chongisa/wedding-to-do-tah-dah/>

I want a simple, clean design for the app with a capability to insert tasks and mark done/complete. Similar to a chore or to-do list app.

I like the personal list and all tasks app design

Technology

The build will be similar to the weather app process with Angular or I might try to do it with Vue JS to see how the setup for that framework is like. Local storage or Firebase as a stretch goal. HTML, CSS, and JS. Coollors for color palette and Font Awesome for text.

Timeline: <http://madebyisa.com/project-hub/>

Tasks list and schedule (weeks)

- 1st Design
- 2nd Design build, set up development environment
- 3rd Add API, Build MVP features (Add Task, Delete, Edit)
- 4th -Refine and polish MVP, add local storage
- 5th Refine and polish MVP
- 6th Prepare portfolio entry with relevant material

MVP Features

Create tasks and descriptions with it or subtasks and store.
Functionality to check off/mark done, edit, and remove.

Stretch goals-Incorporate Firebase, add a calculator as a cost/budget tracker tool.

Wireframes

Main Home Page

The wireframe shows a mobile app interface. At the top, there are two blue buttons: "Wedding To-do App" on the left and "About" on the right. Below these is a large blue rectangular area with a thin yellow 'X' drawn across it from corner to corner. At the bottom of the screen, the text "Start your wedding checklist!" is centered. Below this text is a single blue button labeled "Wedding Name".
